CAPSTONE PROJECT GUIDELINES

These guidelines serve as a framework for the undergraduate final year capstone project. These guidelines cover the procedures, goals, and responsibilities of students and supervisors involved in the undergraduate project.

1. Objectives

The objective of these guidelines is to provide a clear idea about the strategy for developing a capstone project. It also guides students and faculty supervisors about the undergraduate final year capstone project.

2. Major Steps of the Capstone project

1st term

1. Group Formation
2. Project Selection
3. Project Proposal Presentation
4. Project Design
5. Report Submission and Presentation on Project Design

2nd term

1. Project Implementation
2. Preliminary Demonstration
3. Testing/Simulation/Outcome Evaluation
4. Necessary Corrections/Improvements
5. Final Demonstration
6. Project Report Submission
7. Final Presentation, Q&A

Explanation of the steps to follow

1. *Formation of groups of students and assignment of supervisors to them* according to the decisions of the EEE Dept. The groups and their corresponding supervisors need to be notified.
2. *Implementing the project* in 2 semesters.
 - a. *Selecting the project title* after identifying the problem following the guidance of the supervisor and advice from the industry advisory panel.
 - b. *Submitting a project proposal* to the department office through the project supervisor.
 - c. *Submitting and presenting* progress report after the 1st term.
 - d. *Submitting and presenting* progress report after the 2nd term.
 - e. *Demonstrate* the project after the final term in front of the industry advisory panel.
 - f. *Defending the project (final term)*. The exam date (normally at the end of each term) will be announced by the department.
 - g. *Submitting the draft project report (final term)* to the project supervisor.
 - h. *Submitting the 3 copies of the final project report* (for supervisor, EEE department, and IUT library) to the department office through the supervisor for final grading.

3. Project Supervisor

Project supervisors are chosen by the department for a group of 5 students. Students will work under their supervisor for the whole duration of the capstone project in both semesters.

4. Project Proposal

A written *project proposal* is required to initiate a final year design project and it is due a few weeks from the beginning of the 1st term of final year design project. The proposal is a description of the research to be conducted by the student and is normally 2-3 A4-size pages in length. The proposal is a written statement/plan of intent for what is to be researched, investigated, and pursued. The proposal establishes a clear focus by framing a research question. These range from empirical research questions or hypotheses to a statement of intent. The proposal establishes the principal question to address, establishes a context for that question, and outlines what steps will be taken to answer the question. The research plan should be clearly written and the goals or objectives of the research should be clear to anyone reading the proposal. The proposal is not a contract; instead, its function is to help students identify a problem to be investigated and to outline the direction of their research. The proposal is not intended to be rigid but rather a document that evolves as the research proceeds during subsequent terms in response to unanticipated results, problems, or emerging directions. Students should expect to revise several iterations of their project proposal in response to comments from their supervisor. Once accepted and signed by the supervisor, the student will submit the Project Proposal to the department's office. A *format* of the *project proposal* is available in the department office/website.

The proposal form has been attached below:

5. PROPOSAL FOR CAPSTONE PROJECT

Academic Year		2021-2022	
Student Name	Student ID	E-mail Address	Phone
Supervisor's Name:		Designation:	

1. Tentative title

2. Goals of the project

3. Motivation and background

4. Description of project implementation methodology

5. Description of how complex engineering problems can be addressed

6. Socio-cultural, environmental, and ethical impact of the project

7. Summary of the project

8. Work plan of the project

Winter Semester	
Summer Semester	

9. Proposed budget for implementing the project

Sl	Items	Justification	Price (BDT)
1.			
2.			
3.			
4.			
5.			
6.			
Total cost (BDT):			
In words:			

Student's Signature		Date	

Supervisor's Signature		Date	
-----------------------------------	--	-------------	--

6. Conducting the Research Project

1. The plan for completing the research project as described in the *project proposal* should envision approximately 6 hours per week (including work in the laboratory, field, library, etc.) in the 7th and 8th semesters.
2. Ideally, fieldwork, laboratory studies, and/or other data collection should be completed early in the semester before graduation.
3. Students must meet their project supervisor at least once a week to inform him about their research progress.
4. Students must begin to write their project at least one month before the student plans to defend the project.
5. Students must submit their project report to their supervisor at least two weeks before the final presentation.
6. Students will be granted a maximum budget of BDT 15,000 (per group) for their project.

7. Defending the Project

Students have to present their project outcome via PowerPoint presentation as well as through a demonstration of the working of the project.

8. Presentation

The presentation schedule will be announced by the department possibly at the end of each term. The students will prepare their PowerPoint slides and give several practice presentations in front of their supervisor and classmates before coming to the final presentation. The total number of slides will be approximately 15-20 which includes the following topics:

1. Title page
2. Outlines of presentation
3. Background, motivation, objectives
4. Research methodology
5. Proposed system
6. Theory, modeling, simulation, experiments
7. Addressing knowledge profile, complex engineering problems, and activities
8. Impact of the project outcome on health, society, environment, and sustainability
9. Results and discussions
10. Conclusion
11. Future works

The distribution of presentation time will be as follows:

1. Presentation – 15 mins
2. Q/A session – 10 mins

9. Demonstration

The students have to properly demonstrate the working project. The project's working principles and outcomes should be aligned with what was mentioned in the project proposal. The students should also show how much of the proposed project outcomes have been achieved with the actual project.

10. Examination Committee

The examination committee members will be assigned by the Head of the Department. One or more external members including the industry advisory panel (IAP) may be included in the committee.

11. Report Writing

The project report will be approximately 30 – 50 pages (12-point Times New Roman, 1.5-line spacing) excluding the appendix and preliminary pages. Student must write their report according to the format of the undergraduate project. A template of the final year design project report is available in the department office/website.

12. Report Submission

Three copies of hard binding (one copy each for project supervisor, IUT library, and EEE department) and a soft copy (PDF format) of the report must be submitted to the department office through the supervisor for final grading. Students must submit their preliminary / draft report to their project supervisor at least two weeks before the final presentation or according to the direction of the project examination committee. Students must modify the report according to the comments/feedback received from the project supervisor and other examiners, if any, before submitting the final report to the department office.

13. Plagiarism

The department of Electrical and Electronic Engineering (EEE), Islamic University of Technology, Bangladesh considers plagiarism a very serious issue. In submitting assessed written work, it is important to beware of plagiarism, which is the unacknowledged use of other people's material. The department considers this as cheating and it can have serious consequences, even if it is unintentional. Disciplinary action will be taken and the University policy shall be strictly reinforced in this regard. To avoid any misunderstanding, students are advised to put quotations from other authors within quotation marks and give full references to every source they use, even if they are not quoting directly from it. Students can take advice from their supervisor if they are worried about unintentional plagiarism.

A professional plagiarism checker will be used to check the similarity index of the submitted report and will be graded according to the percentage of the similarity index. However, the similarity index of the final hard binding report must be less than 30%.

14. Rubrics

The undergraduate capstone project will be graded by the members of the examination committee including the project supervisor and members from IAP. The set of rubrics shown in the following table can be used as a sample for grading.

Criteria	Level of Achievement				
	Excellent 5	Good 4	Marginally satisfactory 3	Needs improvement 2	Poor ≤1
Project Synopsis (10%) <i>[CO1, CO2,] [PO1- 5% PO2- 5%]</i>	The description is completely clear, succinct, simple, and persuasive.	The description is clear and convincing, however there are some minor issues.	The description is sufficient but requires additional clarity, and it does not provide a comprehensive explanation of the project with a clear overview.	Few features of the idea are evident, whereas the majority are obscure.	It is not really apparent what the proposal is.
Appraising the state of the art (10%) <i>[CO1, CO2, CO12] [PO1- 2.5% PO2- 2.5% PO12- 5%]</i>	There is an adequate analysis of a sufficient number of exactly relevant and contemporary works.	a greater quantity of existing works that are precisely relevant but are not recent are reviewed.	There is a greater focus on reviewing a larger quantity of existing advancement that are broadly pertinent but are not recent.	Only a few works that are widely relevant are reviewed.	No analysis of the current advancement of the relevant work available has been conducted.
Design competence and economic viability (25%) <i>[CO3, CO4, CO5, CO6, CO9] [PO4- 5% PO8- 2.5% PO5- 2.5% PO11- 5% PO3-10%]</i>	The necessary tools, procedures and workflows are clearly stated and absolutely feasible, the design looks economically practical.	The necessary tools, procedures and workflows are stated and feasible, the design can be economically practical.	It seems that the project's execution methods and procedures are feasible, yet there exists ambiguity from an economical point of view..	The necessary tools, procedures and workflows are vaguely described, the design appears economically impractical.	Absence of workflows, impractical design

Criteria	Level of Achievement				
	Excellent 5	Good 4	Marginally satisfactory 3	Needs improvement 2	Poor ≤1
Project Implementation and Outcome (20%) <i>[CO3, CO5, CO9, CO10]</i> <i>[PO4- 5%</i> <i>PO5- 5%</i> <i>PO3- 5%</i> <i>PO9- 5%]</i>	The hypothesis to be explored, probable outcomes, and how they will be distinguished have all been fully and precisely described by the student and both the existing and the proposed models are accomplished successfully	The hypothesis to be explored, probable outcomes, and how they will be distinguished have all been fully described by the student and the existing model is implemented and a large portion of the new model is also accomplished.	The hypothesis to be explored, probable outcomes, and how they will be distinguished have all been adequately described by the student and the existing model is implemented for benchmarking purposes.	The proposed model lacks accurate identification of its individual modules and the hypothesis to be explored, probable outcomes, and how they will be distinguished have been poorly described by the student.	No identification of different modules of the project has been done and students have failed to clarify the question to be answered, the possible results, or how they will be distinguished.
Socio - Cultural, environmental and ethical impact (15%) <i>[CO7, CO8]</i> <i>[PO6- 7.5%</i> <i>PO7- 7.5%]</i>	The proposed project has a high impact on the environment, society, or culture and also has decent ethical significance.	The proposed project has a high impact on the environment, society, or culture but has no ethical significance.	The proposed project has a moderate impact on the environment, society, or culture but has no ethical significance.	The proposed project has a relatively mild impact on the environment, society, or culture but has no ethical significance.	The proposed project has no effect on the environment, society, or culture, and has no ethical significance.
Project presentation/poster/defense (10%) <i>[CO10, CO11]</i> <i>[PO9- 5%</i> <i>PO10- 5%]</i>	Students exhibit a superior Capstone Project with an investigation, service learning, or innovative methodologies and present an advanced project poster/defense. Student's responses clearly show thorough comprehension and depth of the problem beyond the presentation	Students exhibit a moderate Capstone Project with an investigation, service learning, or innovative methodologies and present an adequate project poster/defense. Student's responses show adequate comprehension and depth of the problem beyond the presentation	Students exhibit a Capstone Project with an investigation or innovative methodologies and present a project poster/defense properly. Student's responses show moderate comprehension and depth of the problem beyond presentation	Students exhibit a Capstone Project with an investigation of methodologies and present a project poster/defense which lacks proper justification. Student's responses show inadequate comprehension and depth of the problem beyond the presentation	Students fail to present the defense/poster of the project with any kind of justification. Responses from students fail to reveal a depth of insight or comprehension of the issue.
Project Report (10%) <i>[CO11]</i> <i>[PO10-10%]</i>	Advanced degrees of comprehension and application of the experience are shown in the capstone project report. The Capstone Project Report demonstrates exceptional knowledge and/or inventiveness.	Proper degrees of comprehension and application of the experience are shown in the capstone project report. The Capstone Project Report demonstrates proper knowledge.	Degrees of comprehension and application of the experience are shown in the capstone project report. The Capstone Project Report demonstrates proper knowledge.	Degrees of comprehension and application of the experience are shown in the capstone project report, which lacks the demonstration of proper knowledge.	Students fail to generate report for the capstone project

15. Course Outcomes (COs) and their Mapping with Program Outcomes (POs)

COs	CO Statement	POs
CO1	Apply knowledge of electrical and electronic engineering to the solution of complex engineering problems.	PO1
CO2	Identify a contemporary real life problem related to electrical and electronic engineering by reviewing and analyzing existing research works.	PO2
CO3	Determine functional requirements of the problem considering feasibility and efficiency through analysis and synthesis of information.	PO4
CO4	Select a suitable solution and determine its method considering professional ethics, codes and standards.	PO8
CO5	Adopt modern engineering resources and tools for the solution of the problem.	PO5
CO6	Prepare management plan and budgetary implications for the solution of the problem.	PO11
CO7	Analyze the impact of the proposed solution on health, safety, culture and society.	PO6
CO8	Analyze the impact of the proposed solution on environment and sustainability.	PO7
CO9	Develop a viable solution considering health, safety, cultural, societal and environmental aspects.	PO3
CO10	Work effectively as an individual and as a team member for the accomplishment of the solution.	PO9
CO11	Prepare various technical reports, design documentation, and deliver effective presentations for demonstration of the solution.	PO10
CO12	Recognize the need for continuing education and participation in professional societies and meetings.	PO12

16. Organization of the Report

The organization of report will contain the following pages:

Title Page

Declaration Page

Approval Page

Acknowledgements

Abstract

Contents Page

List of Figures

List of Tables

Chapter 1: Introduction

Chapter 2: Literature Review & Methodology

Chapter 3: Main Work (may be extended 2 to 3 chapters)

Chapter 4: Results and Discussions

Chapter 5: Conclusions

References

Appendices

17. Contents of the Chapters

Chapter 1: Introduction

A brief description of the background, motivation, and objectives should be placed in this chapter. The organization of this report shall also be included here.

Chapter 2: Literature Review & Methodology

A review of the literature found in the research area, with particular emphasis on theories and debates on the subject should be included in this chapter. A review of the methods used to carry out this research with a discussion of the strengths and weaknesses of the approach followed and the approaches rejected will also be placed here. This will place the research into a broader academic context and may give a theory or hypothesis that someone wishes to test in empirical research.

Chapter 3: Main Work (Design, Implementation, Experimentation, Simulation, etc.)

A detailed analysis of theoretical studies and experiments (if any) to carry out this research should be placed in this chapter.

Chapter 4: Results and Discussions

An account of what was found from this study and a more critical analysis of the results in which someone discusses the results in the context of the original aims should be placed in this chapter.

Chapter 5: Conclusions

A brief summary of the findings and recommendations for future work should be included in this chapter.

18. Format of the Report

I. GENERAL DOCUMENT GUIDELINES

Paper: The project must be printed on good quality white paper on both sides of the paper.

Length: Minimum length is 40 pages, which only includes the main text and excludes the endnotes and appendices. There is no Maximum number of pages. The project will be evaluated based on quality instead of length.

Margins: Left Margin – 3 cm, Right Margin – 2.5 cm, Top Margin – 2.5 cm, Bottom Margin – 2.5 cm, Header 1 cm, Footer 1 cm.

Font Size and Type: 12-point Times New Roman font.

Line Spacing: Documents should be 1.5-line spacing throughout, except for the text of the table having more than two lines in a cell.

Paragraph Indentions: 1 cm

Order of Materials: Title Page, Declaration Page, Approval Page, Acknowledgments, Abstract, Table of Contents, List of Figures, List of Tables, the Text of the Project, List of References, Appendix. (see the template)

Numbering of Pages: Page numbers must be centered 1.5 cm below the bottom margin as set by the footer. There is no heading to the left or right of the page number. The placement of page numbers must be consistent throughout the project. Pages should be numbered sequentially throughout the chapter. Preliminary pages are numbered as follows:

- The title page is counted as page i (assumed, do not print number)
- The remaining preliminary pages are numbered with lowercase Roman numerals (ii, iii, etc).
- The main body of the text and the reference section are consecutively numbered with Arabic numerals beginning on page “1” and continuing throughout, including text, illustrative materials, a list of references, and appendices.

II. PRELIMINARY PAGES

The preliminary pages include the title page, declaration page, signature page, acknowledgments, abstract, table of contents, list of figures, and list of tables. No page numbers should be shown for the title page but it is assumed to be page i. Then starting from the declaration page until the abstract pages will be numbered with lowercase Roman numerals and considered to be page ii to ix.

Title page: (see the template)

1. Logo of Islamic University of Technology, Bangladesh.
2. Name of Islamic University of Technology, Bangladesh: Title case, **Bold**, Times New Roman, 14- point, Centered.
3. Title of Project: Title case, **Bold**, Times New Roman, 20-point font, Centered.
4. Student’s Name and ID: Title case, Times New Roman, 14-point font, Centered.
5. Statement of presentation in the form: “in Consideration of Partial Fulfillment for the Requirements of the Degree of BACHELOR OF SCIENCE IN ELECTRICAL AND ELECTRONIC ENGINEERING”; Times New Roman, 12-point font, Centered.
6. Name of the Department: Title case, Times New Roman 14-point font, Centered.
3. The term and Year of project submission: Title case, Times New Roman, 14-point font,

Centered.

Declaration page: (see the template)

1. The word “DECLARATION” in uppercase, **Bold**, Times New Roman, 16-point font, Centered.
2. The declaration “I do hereby an academic qualification/certificate/diploma or degree: Title case, Times New Roman 12-point font, justified.
3. Student’s Name and ID: Title case, Times New Roman, 12-point font, Centered.
4. Signature of students with date: Title case, Times New Roman, 12-point font, Centered. The original signature of the students must be put above the name and ID.

Approval Page: (see the template)

1. Title of Project: Title case, Bold, Times New Roman, 16-point font, Centered.
2. Student’s Name and ID: Title case, Times New Roman, 14-point font, Centered.
3. Approval from project supervisor in the form: lower case, Times New Roman, 12-point font, Centered.
4. Supervisor’s name with title and Academic Position: Times New Roman, 12-point font, Centered.
5. Original Signature of the project supervisor in the final copy is required (if submitting electronically, the signature page is left unsigned)

Acknowledgments (see the template): This page is to thank those who have helped in the process of obtaining the degree. Permission to quote copyrighted material is listed here, as well as acknowledgments for grants and special funding if any. This should occupy a single page and be 1.5-line spaced.

Abstract (see the template): The project must contain an abstract. An abstract is a concise account of the project or dissertation and should state the problem, describe the procedure or method used, and summarize the conclusions reached. Paragraphs are formatted with the same layout used in the document. This should occupy a single page and be 1.5-line spaced.

Table of Contents (see the template): Follow the format of the abbreviated sample included in these instructions. For clarity, use 12-point font. All chapter titles, headings, and subheadings should appear in the Table of Contents. The font style of items listed within the Table of Contents should be the same as the font used within the text (e.g. headings listed within the Table of Contents are in the same font style as in the body of the project).

List of Figures and List of Tables (see the template): The list of figures/ tables must conform to the examples provided in the template and include all tables or figures (i.e. illustrations, photographs, pie/bar charts, and maps) within the body of the project listed by table/figure number and table/figure caption. The figure number should be placed below the figure followed by the figure caption and be centered. The table number should be placed above the table followed by the table caption and be centered.

III. BODY OF THE REPORT:

Page numbering: The body of the project and appendices are numbered in Arabic numerals starting with 1 and continuing until the last page of the project.

Chapter: The first line of the first chapter will be “**CHAPTER 1**”, uppercase, 20-point bold.

The title of the chapter in capital letters and centered appears two lines below. Use an inverted pyramid and 1.5 line spacing succeeding lines of the title if it is longer than one line. Three lines below the chapter title, place the first line of text. Succeeding chapters, “**CHAPTER 2**”, etc., should follow this same format. Do not use terminal punctuation on any chapter headings. Each chapter should begin on a new page. An example is shown on the following page.

CHAPTER 1

INTRODUCTION

The first level of chapter 1 will be placed here.

Headings and Subheadings of Chapters: The subdivision within a chapter or section does not begin on a new page unless the preceding page is filled. If there is no room for the complete

heading and at least two lines of text at the bottom of a page, the new subdivision should begin on the next page. All chapter titles and headings should follow the following example.
Example

1.1 First level heading: Sentence case, Bold, 12 point.

You would indent and start writing the text here

1.1.1 Second level heading: Sentence case, Bold, 12 point.

You would start writing the text here after the period and keep wrapping around underneath the subheading like this.

1.1.1.1. Third level heading: Lower case, *Italic*, 12 point.

You would start writing the text here after the period and keep wrapping around underneath the subheading like this.

Captioning and Numbering the Figures: The numbering of figures will start with the chapter number followed by the numbers in Arabic numerals by placing a decimal point in between. For example, figure numbers in chapter 2 will start as Figure 2.1, Figure 2.2, and so on. The figure caption will follow the figure number and should be placed at the bottom of each figure. Below is an example of a figure caption and number.

Fig. 2.3 T-LCL type immittance circuit

Captioning and Numbering the Tables: The numbering of tables will start with the chapter number followed by the numbers in capital Roman by placing a hyphen in between. For example, table numbers in chapter 3 will start as Table 3.1, Table 3.2, and so on. The Table caption will follow the Table number and should be placed at the top of each Table. Below is an example of a figure caption and number.

Table 3.1 Circuit parameters of proposed immittance circuit

Components	Values
V_1	200 [volt]
$L_1 = L_2$	23.6 mH
C	15.6 μ F
$r_1 = r_2$	0.28 Ω

IV. REFERENCES

Be sure that if a work is cited in the text, it must be in the references and vice versa. The references must be cited in the text in ascending order as they are listed and be single-line spaced. Concerning the format of the references, using a hanging indent i.e. the first line of the reference is flushed to the left margin and the rest of the reference is indented ½ cm. The first and middle names (if given) of the author(s) are listed in initials only. The title of the work should be placed within double inverted commas followed by the journal title/conference name (in italic), issue/volume number, page numbers, and year of publication in parentheses except for books, electronic resources, and company reports. The above rules for listing references of journal articles, conference proceedings, books, and electronic sources (websites) are presented with examples as follows:

1. For Journal Articles

- [1] A. Vaskuri, H. Baumgartner, P. Kärhä, G. Andor, and E. Ikonen, "Modeling the spectral shape of InGaAlP-based red light-emitting diodes," *Journal of Applied Physics*, vol. 118, no. 20, pp. 203103-1–203103-7, Jul. 2015

2. For Conference Proceedings

- [2] Mingyue Yu, Anfeng Liu, Neal N. Xiong, Tian Wang, "An Intelligent Game-Based Offloading Scheme for Maximizing Benefits of IoT-Edge-Cloud Ecosystems", *IEEE Internet of Things Journal*, vol.9, no.8, pp.5600-5616, 2022.

3. For Dissertation/Project

- [3] Knight, K. A., "Media epidemics: Viral structures in literature and new media", A Doctoral Dissertation presented at University of California, Santa Barbara (January, 2011).

4. For Internship Report

- [4] Alejandro Maria, "Development of a GUI for a SAXS data analysis modeling program for modeling proteins in solution", An internship report presented at Joseph Fourier University, France (December, 2009).

5. For Books

- [5] D Jennings, A. Flint, Introduction to Medical Electronics Applications, John Wiley and Sons, 4th Edition (2010).

6. For Electronic Resources (websites)

- [6] <http://www.neural-semiconductor.com/home> accessed on 23 October, 2022.

7. For Company/Industry/Organization Report

- [7] NSL Annual report, July, 2022.

V. APPENDICES

Appendices may include data tables, source codes, analytical procedures, survey forms, or any other supplementary material provided by the supervisory committee. Each Appendix begins on a separate page. Each Appendix is labeled with ascending letters (e.g. A, B, C, etc.) and a title. Pages should be numbered in sequence with the rest of the project. The same margins and line spacing should be maintained as used in the body of the text.

HARDBOUND COPY

A hardbound copy cover (top and side views) is given on the following 2 pages.
