Criteria	Level of Achievement				
	Excellent 5	Good 4	Marginally satisfactory 3	Needs improvement 2	Poor ≤ 1
Project Synopsis (10%) <i>[CO1, CO2,] [PO1- 5% PO2- 5%]</i>	The description is completely clear, succinct, simple, and persuasive.	The description is clear and convincing, however there are some minor issues.	The description is sufficient but requires additional clarity, and it does not provide a comprehensive explanation of the project with a clear overview.	Few features of the idea are evident, whereas the majority are obscure.	It is not really apparent what the proposal is.
Appraising the state of the art (10%) <i>[CO1, CO2, CO12] [PO1- 2.5% PO2- 2.5% PO12- 5%]</i>	There is an adequate analysis of a sufficient number of exactly relevant and contemporary works.	a greater quantity of existing works that are precisely relevant but are not recent are reviewed.	There is a greater focus on reviewing a larger quantity of existing advancement that are broadly pertinent but are not recent.	Only a few works that are widely relevant are reviewed.	No analysis of the current advancement of the relevant work available has been conducted.
Design competence and economic viability (25%) <i>[CO3, CO4, CO5, CO6, CO9] [PO4- 5% PO8- 2.5% PO5- 2.5% PO11- 5% PO3-10%]</i>	The necessary tools, procedures and workflows are clearly stated and absolutely feasible, the design looks economically practical.	The necessary tools, procedures and workflows are stated and feasible, the design can be economically practical.	It seems that the project's execution methods and procedures are feasible, yet there exists ambiguity from an economical point of view..	The necessary tools, procedures and workflows are vaguely described, the design appears economically impractical.	Absence of workflows, impractical design

Criteria	Level of Achievement				
	Excellent 5	Good 4	Marginally satisfactory 3	Needs improvement 2	Poor ≤ 1
Project Implementation and Outcome (20%) <i>[CO3, CO5, CO9, CO10]</i> <i>[PO4- 5% PO5- 5% PO3- 5% PO9- 5%]</i>	The hypothesis to be explored, probable outcomes, and how they will be distinguished have all been fully and precisely described by the student and both the existing and the proposed models are accomplished successfully	The hypothesis to be explored, probable outcomes, and how they will be distinguished have all been fully described by the student and the existing model is implemented and a large portion of the new model is also accomplished.	The hypothesis to be explored, probable outcomes, and how they will be distinguished have all been adequately described by the student and the existing model is implemented for benchmarking purposes.	The proposed model lacks accurate identification of its individual modules and the hypothesis to be explored, probable outcomes, and how they will be distinguished have been poorly described by the student.	No identification of different modules of the project has been done and students have failed to clarify the question to be answered, the possible results, or how they will be distinguished.
Socio - Cultural, environmental and ethical impact (15%) <i>[CO7, CO8]</i> <i>[PO6- 7.5% PO7- 7.5%]</i>	The proposed project has a high impact on the environment, society, or culture and also has decent ethical significance.	The proposed project has a high impact on the environment, society, or culture but has no ethical significance.	The proposed project has a moderate impact on the environment, society, or culture but has no ethical significance.	The proposed project has a relatively mild impact on the environment, society, or culture but has no ethical significance.	The proposed project has no effect on the environment, society, or culture, and has no ethical significance.
Project presentation/poster/defense (10%) <i>[CO10, CO11]</i>	Students exhibit a superior Capstone Project with an investigation, service learning, or innovative methodologies and present an advanced project poster/defense.	Students exhibit a moderate Capstone Project with an investigation, service learning, or innovative methodologies and present	Students exhibit a Capstone Project with an investigation or innovative methodologies and present a project poster/defense properly.	Students exhibit a Capstone Project with an investigation of methodologies and present a project poster/defense	Students fail to present the defense/poster of the project with any kind of justification. Responses from students fail to reveal a

[PO9- 5% PO10- 5%]	Student's responses clearly show thorough comprehension and depth of the problem beyond the presentation	an adequate project poster/defense. Student's responses show adequate comprehension and depth of the problem beyond the presentation	Student's responses show moderate comprehension and depth of the problem beyond presentation	which lacks proper justification. Student's responses show inadequate comprehension and depth of the problem beyond the presentation	depth of insight or comprehension of the issue.
Project Report (10%) [CO11] [PO10-10%]	Advanced degrees of comprehension and application of the experience are shown in the capstone project report. The Capstone Project Report demonstrates exceptional knowledge and/or inventiveness.	Proper degrees of comprehension and application of the experience are shown in the capstone project report. The Capstone Project Report demonstrates proper knowledge.	Degrees of comprehension and application of the experience are shown in the capstone project report. The Capstone Project Report demonstrates proper knowledge.	Degrees of comprehension and application of the experience are shown in the capstone project report, which lacks the demonstration of proper knowledge.	Students fail to generate report for the capstone project

COs	CO Statement	POs
CO1	Apply knowledge of electrical and electronic engineering to the solution of complex engineering problems.	PO1
CO2	Identify a contemporary real life problem related to electrical and electronic engineering by reviewing and analyzing existing research works.	PO2
CO3	Determine functional requirements of the problem considering feasibility and efficiency through analysis and synthesis of information.	PO4
CO4	Select a suitable solution and determine its method considering professional ethics, codes and standards.	PO8
CO5	Adopt modern engineering resources and tools for the solution of the problem.	PO5
CO6	Prepare management plan and budgetary implications for the solution of the problem.	PO11

CO7	Analyze the impact of the proposed solution on health, safety, culture and society.	PO6
CO8	Analyze the impact of the proposed solution on environment and sustainability.	PO7
CO9	Develop a viable solution considering health, safety, cultural, societal and environmental aspects.	PO3
CO10	Work effectively as an individual and as a team member for the accomplishment of the solution.	PO9
CO11	Prepare various technical reports, design documentation, and deliver effective presentations for demonstration of the solution.	PO10
CO12	Recognize the need for continuing education and participation in professional societies and meetings.	PO12
